Birding the Arroyo Seco

The Arroyo Seco has just about everything for a terrestrial birder. Stretching about 15 miles from its headwaters at Red Box in the San Gabriel Mountains to its confluence with the Los Angeles River, the Arroyo Seco passes by or through Switzer's campground, Jet Propulsion Laboratory, Hahamongna Watershed Park, Brookside Golf Course, the Rose Bowl, Lower Arroyo Seco Park, and Debs Regional Park. The habitats it travels through include; coniferous and deciduous forest; chaparral; oak woodland; riparian; pond, rivers and streams; eucalyptus groves; and manicured parks.

This list of more than **180** species shows all the birds that have been seen in the Arroyo Seco, including those of historical significance. Birders must be aware that the abundance codes are for birds in proper habitat. Thus to find a Mountain Quail one must search the conifer forest or chaparral of the upper Arroyo headwaters above 1000 feet, while a Killdeer may be found on wet lawns or stream channels along the lower Arroyo.

Good birding! And if you see a bird not on this list, please contact Pasadena Audubon Society at WWW.PASADENAAUDUBON.ORG to let us know.

Codes		
C	Common	<i>Dozens to hundreds encountered under appropriate conditions</i>
F	Fairly common	<i>Up to a dozen encountered under appropriate conditions</i>
U	Uncommon	<i>Small numbers encountered under appropriate conditions</i>
R	Rare	<i>Few individuals encountered; of regular or near-regular occurrence</i>
V	Very Rare	<i>Encountered in extremely small numbers; of casual occurrence</i>
X	Extremely Rare	<i>Exceedingly few individuals encountered; not regular; of accidental occurrence</i>
I	Irruptive	<i>Of cyclic or sporadic occurrence</i>
E	Extirpated	<i>Species no longer thought to be present in the area or believed to be extinct</i>
*	Breeder	<i>Confirmed breeder</i>
-	Not Present	<i>Not present</i>
